BMO Balanced Strategy

The BMO AM Balanced Fund seeks to achieve stable long-term rates of return through long-term capital growth and current income. Portfolio volatility is reduced through investment in Canadian fixed income, Canadian equities, foreign equities and cash asset categories. The fund’s return objective is to outperform the blended benchmark on a 4-year moving average basis.

OPTIMUM Asset Management

Optimum Integrated Bond Universe

The Optimum Integrated Bond Universe strategy is based on active management by a team of experienced managers. The sources of value added from active management are attributed largely to sector allocation and securities selection. This bottom-up asset management strategy focuses on credit research from data provided by our quantitative and fundamental analyses, as well as our macroanalyses. Securities are selected with our Big Data tool, an exclusive system developed internally. This decision-making platform enhances traditional fundamental and macroeconomic approaches.

Universe Sponsor	NB Global Senior Floating Rate Loans

NEUBERGER

Producing strong senior floating rate loan selection ideas is the key performance driver behind the team's strategy. The strategy is actively managed and is geared to generate returns from multiple sources. The team has found that the primary source of added value is issue selection based on internally generated research. The primary goal in the team's issue selection process is to avoid deteriorating credits. In addition, the team also combines sector and quality rotation to seek to capture additional returns. The result is a process focused on generating strong returns from diversified sources.

VECTOR FINANCIAL

Vector Mortgage Trust

The Vector Mortgage Trust offers a low volatility source of competitive monthly income as part of a fixed income allocation. The objective of the Fund is to provide consistent and attractive risk-adjusted returns derived from direct and indirect interests in commercial and development first mortgages for projects in the GTA and the Greater Golden Horseshoe, where the manager has been successfully lending since 1969. The portfolio is 100 % invested in first mortgages, does not use leverage, there has never been a loss of principal and the NAV has always remained at $10.00. The Fund could also be considered for an absolute return allocation.

GUARDIAN CAPITAL

Guardian Canadian Equity

The Guardian Canadian Equity Strategy is a ‘quality’ oriented Growth-at-a-Reasonable-Price portfolio of 35-50 large-cap stocks diversified by industry/sector and security selection. The strategy incorporates fundamental research and financial analysis within a culture of risk management, with qualitative judgment by an experienced team of investment professionals. Utilizing a bottom-up approach, the investment process is team-based and focuses on a company’s underlying growth characteristics while maintaining a strong discipline towards valuation.

Canadian Equity – Small Cap Universe

Universe Sponsor	Triasima Canadian Small Cap Equity

The Triasima Canadian Small Capitalization Equity Strategy is a single asset class investment mandate that consists in investing in equities and equity equivalent securities of small Canadian organizations. Small capitalization securities may be identified as having a float capitalization less than three and a half times the weighted average float capitalization of the S&P/TSX SmallCap Index. The objective of the mandate is to seek capital appreciation and dividend income through investing in equities while outperforming the benchmark, the S&P/TSX SmallCap Index.

Hexavest EAFE Composite

The Hexavest EAFE Equites strategy is a top-down, macro-driven equity strategy that invests in international markets. The strategy is designed to achieve long-term capital appreciation by investing in a diversified portfolio comprised primarily of equity securities of mid- to large-cap companies of developed countries. Our distinguishing investment framework is based on fundamental analysis of three vectors : macroeconomic environment, valuation of financial markets, and investor sentiment).

Terminology

Standard Deviation: A measure used to quantify the amount of variation or dispersion of a set of data values. A low standard deviation indicates that the data points tend to be close to the mean (expected value) of the set, while a high standard deviation indicates that the data points are spread out over a wider range of values. The lower the standard deviation, the less volatile a fund is.

Sharpe ratio: Compares a fund's returns to the returns of a risk-free benchmark. It is calculated as the ratio of the average excess return to the standard deviation of these excesses. Funds with higher, more consistent return histories have a higher Sharpe ratio than similar funds with lower or more volatile returns.

Information ratio: This measure is a more general case of the Sharpe ratio. The calculation is the same as the Sharpe ratio, but any appropriate benchmark can be used instead of a risk-free rate. It is calculated as the ratio of the average excess return to the standard deviation of these excesses. Funds with return histories consistently above their benchmark have a higher Information ratio than similar funds with lower or more volatile returns. The higher ratio is better.

Tracking Error: Is the standard deviation of the difference between the returns of a fund and its benchmark. Shows a fund's consistency versus a benchmark over a given time period. A low number indicates that the fund's performance is close to the benchmark, a high number indicates that it's farther away.

Up capture: A measure of the fund's performance in up markets relative to the market itself. If upside is >100, the fund outperformed during positive returns. A value of 110 suggests the manager performs 10% better than the market when the market is up during the selected time period.

Down capture: A measure of the fund's performance in down markets relative to the market itself. If downside is < 100, the fund lost less during negative returns. A value of 90 suggests the manager's loss is only 9/10th of the market loss during the selected time period.

Beta: Measures volatility (systematic risk) compared to the benchmark. Helps investors understand whether a fund moves in the same direction as the rest of the market and how volatile it is compared to the market. If the number is >1, the fund is more volatile. If the number is < 1, the fund is less volatile. A number of 1.2 indicates that the fund is 20% more volatile than the benchmark.

Up market return: The annualized return for a fund during up markets, defined as periods where the return of the benchmark is greater than or equal to zero.

Down market return: The annualized return for a Manager during down markets, defined as periods when the return of the benchmark was less than zero.

Quartile rank: Divides the data set into four equal parts (1,2,3,4). The higher the rank, the better. Indicates how a fund has performed relative to its peers.

Percentile rank: Divides the data set into 100 equal parts (1-100). The higher the rank the better. Indicates how a fund has performed relative to its peers.

ESG Integration: The ESG symbol represents that the product employs a framework for ESG Integration into the investment process. The PRI (Principles for Responsible Investment) defines ESG integration as "the explicit and systematic inclusion of ESG issues in investment analysis and investment decisions." Put another way, ESG integration is the analysis of all material factors in investment analysis and investment decisions, including environmental, social, and governance (ESG) factors.
