Optimum Integrated Bond Universe

The Optimum Integrated Bond Universe strategy is based on active management by a team of experienced managers. The sources of value added from active management are attributed largely to sector allocation and securities selection. This bottom-up asset management strategy focuses on credit research from data provided by our quantitative and fundamental analyses, as well as our macroanalyses. Securities are selected with our Big Data tool, an exclusive system developed internally. This decision-making platform enhances traditional fundamental and macroeconomic approaches.

Franklin Canadian Core Plus Bond Fund - Series O

**FRANKLIN
TEMPLETON**

This Fund seeks high current income and some long-term capital appreciation by investing primarily in Canadian federal and provincial government and corporate bonds, debentures and short-term notes. The Fund maintains an over-weighted position in high-quality corporate and provincial issues and an under-weighted position in Canadian federal bonds. The Fund may invest in foreign securities.

TD Canadian Short Term Investment

The Fund seeks to achieve a high rate of interest income and at the same time preserve capital and maintain liquidity. The portfolio is invested in money market instruments, such as treasury bills of Canadian governments, bankers' acceptances of Canadian chartered banks and commercial paper of Canadian corporations. The portfolio managers focus on the Canadian corporate debt market as well as global macroeconomic trends. The Fund's main attribute is its high corporate debt weighting and follows a "bottom-up" strategy using diligent credit analysis to add value and enhance long-term performance.

Short Term Bond

The Fund is managed according to a management style primarily based on securities selection and issuers. The manager also integrates interest rate anticipation in his management process. The fund is characterized by a short and medium term maturity, which minimizes the impact of interest rate fluctuations while generating a good income.

DGIA Long Term Universe Bond Mandate

The strategy aims to achieve a risk-adjusted total return, consistent with preservation of capital and prudent investment management by actively investing primarily in a diversified portfolio of Canadian dollar Fixed Income Instruments with long-term maturities. The strategy employs a fundamental investment approach targeting a consistent allocation of value added through management of duration, yield curve and credit risk.

VanEck®

Access the opportunities.

VanEck Emerging Markets Bond Strategy

The VanEck Emerging Markets Bond Strategy (the “Strategy”) seeks to exploit opportunities wherever they are in the emerging markets fixed income asset class. The Strategy employs bottom-up, country and company-driven views along with a proprietary investment process that aims to normalize country and issuer data, analyses risk premium, and conducts a series of tests to assess short- to medium-term risk. The Strategy seeks total returns, consisting of income and capital appreciation. The Strategy can invest in debt securities that are issued by governments, quasi-government entities or corporations in emerging markets countries.

Vector Mortgage Trust

The Vector Mortgage Trust offers a low volatility source of competitive monthly income as part of a fixed income allocation. The objective of the Fund is to provide consistent and attractive risk-adjusted returns derived from direct and indirect interests in commercial and development first mortgages for projects in the GTA and the Greater Golden Horseshoe, where the manager has been successfully lending since 1969. The portfolio is 100 % invested in first mortgages, does not use leverage, there has never been a loss of principal and the NAV has always remained at \$10.00. The Fund could also be considered for an absolute return allocation.

Hillsdale Canadian Micro Cap Equity Strategy

Hillsdale's Canadian Micro-Cap Equity Strategy reflects over a quarter of a century of experience managing active small cap strategies. Eight complementary stock selection strategies are used to evaluate and rank Canadian micro-cap stocks resulting in a “core” investment style with the following characteristics: 1) Compelling active return and risk metrics, 2) Consistent value added and a smoother investment journey, and 3) A robust & resilient style for most market environments.

EQV Canadian Premier Equity Fund

The Invesco Canadian Premier Growth strategy employs a fundamental research process that uses a bottom-up, active, long-term investment approach based on the Earnings, Quality and Valuation ("EQV") characteristics of each company. It can be described as a "Quality Growth" strategy with a focus on valuation. A majority of the Fund's non-cash assets will be invested in securities of Canadian issuers. The investment process and approach is driven by our focus on "bottom-up" stock selection.

Mackenzie Quantitative US Large Cap

The Mackenzie US Quantitative Large Cap strategy seeks to outperform the S&P 500 index by 1.0-1.5% over full market cycles utilizing a systematic, quantitative, bottom-up stock selection investment process based on fundamental insights. The process employs a flexible, high-conviction set of proprietary alpha factors to construct a core, risk-aware portfolio designed with the goal of outperforming in a wider array of market environments. The team strives to identify and exploit daily pricing inefficiencies within the US large cap universe.

Setanta EAFE Equity Fund

The EAFE Equity Fund is an actively managed equity portfolio which holds c.30-50 stocks in the European, Australasian and Far East regions. The portfolio is managed in accordance with the Setanta investment philosophy. That is, the managers seek to own good businesses for the long-term at prices below what they think they're worth, carefully considering each investment's risk profile.

Munro Global Growth Long Only Composite

MUNRO

The Fund seeks to maximize long-term capital appreciation primarily through exposure to a concentrated portfolio of growth-oriented equities issued by companies located anywhere in the world. The investment strategy is designed to identify sustainable growth trends that are under-appreciated and mispriced by the market, and the resulting winning and losing stocks.

AJO Vista Emerging Markets Small Cap

AJO Vista Emerging Markets Small Cap portfolios draw from among the 3000 stocks across emerging markets that fall below \$5 billion in market cap. It is a core long-only equity strategy, sector and style agnostic, and well-diversified in terms of industry, fundamental characteristics, and various statistical measures of risk. Active security weights are controlled relative to the MSCI Emerging Markets Small Cap Index benchmark, and holdings average 350 names. Turnover ranges from 75-150%. The annual return and risk objectives are 3.5% gross prospective added value and 4.5% tracking error above our target benchmark.

Terminology

Standard Deviation: A measure used to quantify the amount of variation or dispersion of a set of data values. A low standard deviation indicates that the data points tend to be close to the mean (expected value) of the set, while a high standard deviation indicates that the data points are spread out over a wider range of values. The lower the standard deviation, the less volatile a fund is.

Sharpe ratio: Compares a fund's returns to the returns of a risk-free benchmark. It is calculated as the ratio of the average excess return to the standard deviation of these excesses. Funds with higher, more consistent return histories have a higher Sharpe ratio than similar funds with lower or more volatile returns.

Information ratio: This measure is a more general case of the Sharpe ratio. The calculation is the same as the Sharpe ratio, but any appropriate benchmark can be used instead of a risk-free rate. It is calculated as the ratio of the average excess return to the standard deviation of these excesses. Funds with return histories consistently above their benchmark have a higher Information ratio than similar funds with lower or more volatile returns. The higher ratio is better.

Tracking Error: Is the standard deviation of the difference between the returns of a fund and its benchmark. Shows a fund's consistency versus a benchmark over a given time period. A low number indicates that the fund's performance is close to the benchmark, a high number indicates that it's farther away.

Up capture: A measure of the fund's performance in up markets relative to the market itself. If upside is >100 , the fund outperformed during positive returns. A value of 110 suggests the manager performs 10% better than the market when the market is up during the selected time period.

Down capture: A measure of the fund's performance in down markets relative to the market itself. If downside is < 100 , the fund lost less during negative returns. A value of 90 suggests the manager's loss is only 9/10th of the market loss during the selected time period.

Beta: Measures volatility (systematic risk) compared to the benchmark. Helps investors understand whether a fund moves in the same direction as the rest of the market and how volatile it is compared to the market. If the number is >1 , the fund is more volatile. If the number is < 1 , the fund is less volatile. A number of 1.2 indicates that the fund is 20% more volatile than the benchmark.

Up market return: The annualized return for a fund during up markets, defined as periods where the return of the benchmark is greater than or equal to zero.

Down market return: The annualized return for a Manager during down markets, defined as periods when the return of the benchmark was less than zero.

Quartile rank: Divides the data set into four equal parts (1,2,3,4). The higher the rank, the better. Indicates how a fund has performed relative to its peers.

Percentile rank: Divides the data set into 100 equal parts (1-100). The higher the rank the better. Indicates how a fund has performed relative to its peers.

ESG Integration: The ESG symbol represents that the product employs a framework for ESG Integration into the investment process. The PRI (Principles for Responsible Investment) defines ESG integration as "the explicit and systematic inclusion of ESG issues in investment analysis and investment decisions." Put another way, ESG integration is the analysis of all material factors in investment analysis and investment decisions, including environmental, social, and governance (ESG) factors.
